

Experiment-3.2

Student Name: Onkar Singh

Branch: CSE

Semester: 5th

Subject Name: ADBMS

UID: 23BCS11676

Section/Group: KRG-3B

Date of Performance: 22/08/25

Subject Code: 23CSP-333

1. Aim:

Merging Employee Histories: Who Earned Least? (Hard)

Two legacy HR systems (A and B) have separate records of employee salaries. These records may overlap. Management wants to **merge these datasets** and identify **each unique employee** (by EmpID) along with their **lowest recorded salary** across both systems.

2. Objective

1. Combine two tables A and B.
2. Return each EmpID with their **lowest salary**, and the corresponding **Ename**.

3. DBMS Script :

--EXPERIMENT 03:Merging Employee Histories: Who Earned Least? (Hard)

```
CREATE TABLE A( empid integer, Ename VARCHAR(20), Salary INTEGER);  
CREATE TABLE B(empid integer, Ename VARCHAR(20), Salary INTEGER);
```

```
INSERT INTO A VALUES  
(1,'AA',1000),  
(2,'BB',300);
```

```
INSERT INTO b VALUES  
(2,'BB',400),  
(3,'CC',100);
```

```
SELECT EMPID,Max(ENAME) AS ENAME,MIN(SALARY) AS SALARY  
FROM(  
SELECT * FROM A  
UNION ALL  
SELECT * FROM B  
) AS INTERMEDIATE_RESULT  
GROUP BY empid;
```

4. Output:

Results		Messages	
	EMPID	ENAME	ESALARY
1	1	AA	1000
2	2	BB	300
3	3	CC	100

5. Learning Outcomes:

- Successfully implemented sub-queries to extract top salary earners by department.
- Practiced combining two datasets with UNION ALL.
- Used GROUP BY and aggregate functions (MAX, MIN) to derive meaningful insights.
- Understood how to merge historical records and identify minimum salaries.
- Strengthened SQL querying skills for analytical use cases.
